**API SUMMARY** 

**API METHODS -DEFAULT** 

fraudScannerPost

# Vaarhaft API

API and SDK Documentation

Version: 2.0.0

API for image verification

## **Default**

### fraudScannerPost

Send a ZIP file containing images for processing

### POST

```
/fraudScanner
```

#### **Usage and SDK Samples**

Python

```
import time
import requests
def verifyImages(url, file_path, x_api_key, case_number, case_date=None):
  # Open the zip file in binary mode
  with open(file_path, 'rb') as file:
    # Prepare the file data for posting
    files = {'file': ("images.zip", file, 'application/zip')} # Prepare headers
    headers = {'x-api-key': x_api_key}
    # Prepare payload
    data = {'caseNumber': case_number} if case_date:
    data['caseDate'] = case_date
    # Send the request
       response = requests.post(url, files=files, headers=headers, data=data)
       response.raise_for_status() # Raise an exception for HTTP errors
    except requests.exceptions.RequestException as e:
       print("Error:", e)
    # Check response status
    if response.status_code == 200:
       print("Server response:")
       print(response.json())
       print("Failed to upload file.")
       print("Status Code:", response.status_code)
       print("Server response:", response.json())
```

## **Parameters**

Header parameters

```
Description
Name
x-api-key*
                      String
                         API key for authentication
                         Required
```

Name

**Body parameters** 

```
Description
body *
                        v {
                          Required: caseNumber,x-api-key,zipFile
                                        ▼ string (binary)
                          zipFile:
                                          ZIP file containing images
                          caseNumber: ▼ string
                                          Case number for tracking
                                        ▼ string (date-time)
                           caseDate:
                                          Date of the case
```

# Status: 200 - ZIP file successfully processed

Responses

Schema

```
